

## **CYBEREVIDENCE, INC. PARTNERS WITH ALERT LOGIC TO PROVIDE FULL SERVICE SECURITY, INTRUSION DETECTION AND COMPUTER EMERGENCY RESPONSE TEAMS**

HOUSTON, Feb. 4, 2004

Today, more than ever it is apparent that computers are an integral part of American business and require adaptations to deal with how the common losses in business are manifesting themselves via computers and the internet. To help businesses shore up their assets and combat losses, AlertLogic, Inc. and CyberEvidence, Inc. have teamed up to provide the best in reporting and response services. CyberEvidence, Inc., headquartered in The Woodlands, Texas is an internationally recognized computer forensics and incident response company. Alert Logic, headquartered in Houston, provides network intrusion detection products and associated monitoring services.

This partnership provides all of the nation's businesses, small, medium, and large with the services previously only available to huge mega-companies. Through a comprehensive partnership agreement, AlertLogic and CyberEvidence have created a "soup to nuts" solution for businesses with smaller IT staffs and budgets. Larger corporations have identified the resources to provide full in-house computer security teams that conduct security assessments, monitor security status, and respond to incidents with an emergency response team. Now, available for very a affordable price, is that same service using certified specialists with subject matter expertise. This unprecedented service is now available for all size businesses that need one or all services at the highest quality for the best value.

CyberEvidence, Inc. customers, who already benefit from immediate and professional computer forensics service and incident response, now have access to valuable intrusion detection and protection. Many businesses call for incident response help after a major problem has been identified on a network. By implementing a perimeter defense to a business network, indications and warnings can be relayed to senior leadership on the health of the network, positioning the company to respond quicker, at lower costs, while keeping the risk and loss as low as possible. However, even with the strongest perimeter defense, there are still risks of major profit losses and fraudulent transactions from insiders, trusted entities, and sophisticated hackers. After an incident such as the above, CyberEvidence, as the Emergency Response Professionals, would handle in concert with the company's staff, investigate the problem and provide solid solutions to even the most challenging of issues in a successful and discreet manner.

As of 1 Jan, 2004 Alert Logic's customers were among the select few businesses in America that have a 24/7 standby emergency response team as a critical first line of defense against suffering major losses from a cyberattack. This level of service was only previously available to major IT investors though costly consultant partnerships and maintenance contracts. Today, AlertLogic's customers have the peace of mind that if the network is breached, professionals with IT, federal and law enforcement backgrounds and computer emergency response team (CERT) experience are standing by. In CERT scenarios, AlertLogic watches over company's networks for security breaches or anomalous activities, once identified, they notify their customers of suspicious activity and the client is briefed on the severity of the event and possible outcomes. The client uses this information to determine if they have the resources, knowledge, and structure to respond. If there is any question, hesitation, or doubt of the company's ability to respond, AlertLogic and CyberEvidence offer incident response services to ensure the client recovers as soon and completely as possible while collecting root cause information and court ready evidence in cases of suspected corporate espionage, fraud, extortion, or violations of policies or laws.

"Few companies have the resources, either human or financial, to monitor, analyze and respond to security threats 24/7" said Misha Govshteyn, Alert Logic's Chief Executive Officer. By outsourcing to CyberEvidence and Alert Logic, any size business can achieve the same high levels of protection and security as their larger competitors. "Many companies are not

prepared to handle digital crime and network attacks and it only takes one well orchestrated effort of corporate espionage to critically handicap a company, resulting in loss of competitive edge and hard tangible assets. We take pride in our 20-years of experience and our ability to bring these companies through the worst and help them ensure their strength at the end of the crisis” observed Paul E. Brown, CyberEvidence, CEO and President.
